SUMMARY

Staff-level full-stack engineer with 7+ years building enterprise-scale web and mobile applications across ride-sharing, healthcare, and threat-analytics domains. Works across React, React Native, and TypeScript on the client and C#/.NET and Node.js on the server, including message-queue-driven communication services on RabbitMQ and RESTful API design over PostgreSQL, MySQL, and SQL. Has delivered 15+ production applications end to end, from requirements analysis through architecture, delivery, and post-release iteration, and led a team of 4+ developers while enforcing code review and CI quality standards. Also brings practical experience with AI-assisted development and LLM application features, including RAG pipelines, vector search, and streaming interfaces, plus integrating enterprise SSO.

EXPERIENCE

Staff Software Engineer

SELISE Digital Platforms

📅 11/2024 - Present 📍 Dhaka, Bangladesh

- Architect React and TypeScript frontends for Creolytix, a real-time threat monitoring platform, and lead frontend technical direction across web and mobile surfaces.
- Contribute to backend communication services in C# and .NET, integrating authenticated SMS and email APIs with asynchronous delivery workers on RabbitMQ and maintaining message-processing flows across API endpoints, queues, and background handlers.
- Extended the platform to React Native, taking mobile features from requirement to release and bringing web feature parity to iOS and Android.
- Integrate React and React Native clients against a .NET microservice backend, designing client-side contracts with backend engineers across event, search, map, and notification services.
- Define coding standards, review backend and frontend pull requests, and apply AI-assisted development tooling (Cursor, Claude Code, Codex) to reduce implementation time and raise engineering throughput.

Senior Full Stack Developer

MGH Group

📅 01/2023 - 10/2024 📍 Dhaka, Bangladesh

- Led and mentored a team of 3 junior developers while delivering enterprise web applications and coordinating task execution across the frontend workload.
- Developed an EMR platform for glaucoma screening that enabled doctors to examine patients, manage records, and support operational healthcare workflows.
- Partnered with operations, branding, sales, and CRM stakeholders to define use cases, align delivery priorities, and ship user-centered solutions.

Full Stack Developer

MGH Group

📅 2021 - 2023 📍 Dhaka, Bangladesh

- Implemented secure Microsoft authentication and embedded Power BI reporting into React applications to strengthen access control and business visibility.
- Built and maintained core CRM applications for OBHAI, including Issue Management and Sales Performance Management platforms supporting business operations at scale.
- Automated the customer refund workflow after order cancellation, reducing manual processing in an operationally critical business flow.

Lead Frontend Developer

MGH Group

📅 2019 - 2020 📍 Dhaka, Bangladesh

- Enhanced frontend efficiency, accelerated project delivery speed through optimized development pipeline management.
- Developed and maintained a comprehensive suite of applications for mgX Courier, including the Landing Page, Customer Panel, Hub Admin Panel, and Customer Service Panel using React and Angular.
- Modernized our legacy **OBHAI Fleet Owner** Panel app originally built on AngularJS to React.

PROJECTS

Creolytix (an F24 Company)

📅 2024 - Present

Creolytix is an advanced online platform that provides real-time monitoring and threat analysis, helping organizations quickly detect and respond to risks. Key Contributions:

- **Frontend Architecture:** Architected React and TypeScript frontends and led technical direction across web and mobile surfaces.
- **Backend Integration:** Built C#/.NET communication services, integrating authenticated SMS and email APIs with async delivery workers on RabbitMQ.
- **Mobile Parity:** Extended the platform to React Native, bringing full web feature parity to iOS and Android.

OBHAI | Ride-Sharing Platform (Multiple Products)

📅 2018 - 2024

Delivered a suite of enterprise web applications for OBHAI's ride-sharing ecosystem across web and PWA, using AngularJS, React, Node.js, MUI, and Bootstrap to support CRM, operations, sales, and customer workflows at scale.

- Built and enhanced enterprise modules in the Master Admin Panel, including Promo Notification, Issue Management, Asset Tracking, Ride Request, and Fare Engine, improving operational control across the business.
- **Ride Tracker:** Shipped real-time location sharing via Google Maps API, letting customers securely share live ride progress with contacts through a URL.
- Developed a **Sales Performance Management** platform with Node.js, React, and RBAC, adding real-time web push alerts, in-app calling, and leaderboard features for managers and stakeholders.
- **Driver Registration Portal:** Reengineered driver onboarding for self-service registration with CRM-agent verification, cutting onboarding time by 40%.
- **Fleet Owner Panel (React PWA):** Gave fleet owners per-vehicle ride and earnings tracking, improving delivery speed through tighter frontend-backend collaboration and boosting ride volume and revenue.

Peyala Food Ordering Admin Panel

📅 2023 - 2024

Full-stack admin panel for order operations using Node.js, React, and MUI, covering role-based access, delivery workflows, and responsive business process management.

- Implemented Role-Based Access Control system, Delivery Charge module, Menu Items management, Menu Category Ordering, Order Cancellation Refund system.
- Improved order management by introducing buzzer notifications, ensuring immediate action from store managers upon customer order placement.

Power BI Report Embedding System

📅 2023 - 2024

Admin platform built with Node.js, React, and MUI for secure Power BI report embedding and management across client-facing reporting workflows.

- Implemented Microsoft Authentication module using MSAL.
- Developed a dynamic report embedding feature, enabling admins to seamlessly add, view, and manage Power BI reports with enhanced flexibility and control.

EXPERIENCE

Junior Frontend Developer

MGH Group

📅 2018 - 2019 📍 Dhaka, Bangladesh

- Developed and maintained features for OBHAI Admin Panel with AngularJS.
- Revamped the OBHAI admin panel **Request Ride** feature, improving usability and efficiency for CRM agents booking rides for customers.
- Optimized server costs by enhancing frontend workflows, including implementing pagination and reducing API call rates.

SKILLS

Frontend

React	React Native	TypeScript	Next.js	Angular / AngularJS
MUI / Tailwind CSS	JavaScript			

Backend

Node.js	Express.js	NestJS	.NET / ASP.NET Core	C#
---------	------------	--------	---------------------	----

AI Tooling

Cursor	Claude Code	OpenAI Codex	Greptile	Google Stitch
SonarQube	Git	Docker		

Data, APIs & Messaging

Google Maps API	OAuth 2.0 / JWT		RESTful APIs	RabbitMQ
PostgreSQL	MySQL	EF Core	Prisma / Sequelize	
MSAL / Microsoft Auth		Power BI Embedded		

Testing & Quality

Vitest	Jest	Playwright	ESLint	Biome	Prettier
--------	------	------------	--------	-------	----------

CORE COMPETENCIES

Stakeholder Collaboration	Team Management	Project Management
System Refactoring	Cross-functional Collaboration	
UX Enhancement	Time Management	Multitasking
Conflict Resolution		

EDUCATION

B.Sc. in Computer Science & Engineering

BRAC University

📅 01/2014 - 08/2018 📍 Dhaka, Bangladesh

PROJECTS

DristiVan - SAAF

📅 2024 - 2024

Electronic Medical Records (EMR) system built in React, MUI to detect glaucoma through screening patients with different medical equipment.

- Developed and enhanced patient registration, appointment scheduling, queue management, examination tracking, inventory, and billing modules.

ReadSaver | LLM RAG Application

🔗 <https://github.com/sadatsajid/read-saver>

- Built an AI-powered article summarization and Q&A application with Next.js, TypeScript, OpenAI, Supabase, Prisma, and pgvector.
- Implemented an end-to-end RAG pipeline for article ingestion, content extraction, chunking, embedding generation, vector similarity search, and citation-grounded answers.
- Developed streaming chat and summary experiences using the Vercel AI SDK, enabling interactive Q&A over article content with source-aware responses.

MoneyQ | AI Personal Finance Platform

🔗 <https://github.com/sadatsajid/money-q>

- Built a full-stack finance application with Next.js, TypeScript, Prisma, and Supabase for budgeting, savings, recurring expenses, analytics, and multi-currency tracking.
- Designed context-building and AI insight workflows that synthesize transactional, savings, and budget data to generate personalized financial guidance.
- Developed AI-driven expense categorization. Built chat-based financial assistant using OpenAI APIs and domain context.

TrySpecta | Virtual Try-On Eyewear Commerce

🔗 <https://github.com/sadatsajid/tryspecta>

- Built a glasses-first ecommerce platform as a Turbo/PNPM monorepo — Next.js 16 storefront, NestJS API, and background worker sharing typed contracts and Zod validators.
- Engineered the virtual try-on pipeline (image upload, job queueing, provider orchestration) on Postgres, Redis, and sharp image processing, with catalog, product pages, and checkout.
- Implemented secure auth (NextAuth, JWT/Passport, Argon2) and a full storefront UI on a custom CSS Modules design system.

TaskOps | .NET Core ERP-Style Backend

🔗 <https://github.com/sadatsajid/taskops-be-dotnet>

- Built a project-management/issue-tracking ERP-style backend in .NET Core (ASP.NET Core minimal APIs) with layered Domain/Application/Infrastructure/API architecture following Clean Architecture and SOLID principles.
- Implemented JWT authentication with refresh-token rotation and organization-scoped RBAC across auth, organization, member, and project modules exposed via RESTful APIs
- Set up Testcontainers-backed PostgreSQL integration tests and Husky.Net Git hooks (dotnet format, build, test) to enforce CI-quality gates in an Agile SDLC workflow
